

PROFILE

I'm mostly focused in backend development. My works involve APIs used by thousands, immediate earthquake reports, open datasets used for studies, telegram bots. I like working with real-world data and making something that solves an actual problem.

PROJECTS

- 1. Contest Hive** - All upcoming programming contests at one place Python | FastAPI
 - Tracks contests across 7 online judges (Codeforces, AtCoder, LeetCode, CodeChef, Toph, HackerRank, HackerEarth)
 - Serves thousands of people every week, handled **3.6M+ API requests** and **1.5M+ page visits** so far
 - Python for the web-scraping and data fetching, MongoDB to store the contests data, and Next.js for the frontend
- 2. Shohid24** - Archive of martyrs from the July Student Movement Next.js | Python
 - Open-source dataset of verified casualty records, built under strict verification standards.
 - Cited in multiple research studies including a **University of Vermont study** and **Analysis paper on Academia**
 - Next.js for the frontend, Python to parse and organize the data, MongoDB for the database
- 3. Quran API** - API for the Quran with no rate limits Nextra | Python
 - Free, no-rate-limit API with text, translation, tafsir and audio for all 114 Surahs of the Quran (120+ GitHub stars)
 - Serves **700K+** requests and **5GB+** every week
 - Python for parsing all the Quran translations and making the whole structure ready, and Nextra for the frontend
- 4. Earthquake Now** - Realtime earthquake reports Python | Maps
 - Posts every earthquake on Telegram as soon as it is registered, with 30,000+ reports published
 - OpenStreetMaps data to get the exact ground view and matplotlib to plot the data

COMPETITIVE PROGRAMMING

- Solved 500+ problems across the online judges so far.
- Number 1 in the code golf leaderboard in Toph with 169 shortest submissions

OPEN SOURCE

- Reported an anonymous-admin user-ID edge case in **tdlib/telegram-bot-api**
- 72 of 79 pull requests merged**; maintainer of **Contest Hive** and **The Quran Project**; **220+** GitHub stars across projects.
- Wrote Cloudflare Pages scripts to work with the API to disable orphaned Access Policies without a paid plan
- Fixed an SSR hydration mismatch in **@uidotdev/usehooks**
- Most of the projects of mine are open-source under the MIT license

SKILLS

Languages	: Python, Javascript, Typescript, C++, Ruby
Backend & Data	: REST APIs, web scrapping, MongoDB, automations
Frontend	: Next.js, Astro.js, React, Tailwind CSS, MDX, Figma
Tools	: Git, Linux, Cloudflare Pages
